

Instructions and Use - Cave Pack Professional

Thank you for purchasing the Cave Pack Professional. This is my fourth content pack that I have made public and I dare say it is the most complex and versatile packs yet. I did my best to test this pack and tried avoid any issues however, errors may exist depending on hardware configurations. Please let me know and I will do my best to help anyone that is having trouble using this pack.

If you have trouble, please contact me via email at;

kapaun01@gmail.com

and use the subject line: **Cave Pack Pro Issue.**

Now let's get started;

To Install the Cave Pack Pro:

Unzip the files into the appropriate folders in your Torque 3D project or manually merge the files with your current folder configuration. If you are missing any texture files, use the material manager to locate them. Each texture set is in the same folder as the model so Torque3D should locate them. Should problems persist, open each material.cs in the model folder and type in the proper path (occasionally, T3D does not properly overwrite directory paths).

IMPORTANT NOTE: Additionally, all material.cs files reflect the EXACT SAME directory structure as presented. Many times, I get requests for info as to why the texture maps do not show up. This is why.

I highly recommend you install and explore the demo level that is included in this package. By hitting F11 while playing the game, you can open the world editor and see the assorted settings used to create the pack. This includes special textures and lighting info. You will also see just HOW all of the cave modules 'fit' together.

Extra Info:

This pack also includes some bonus material that has been released open source but, it fits nicely with this pack so I included them in the package. You can find the additional models and a full resolution MP3 file of David Levy's amazing soundtrack that he did for this pack's promotional video.

Known Issues:

As far as I know, there should not be any issues with the pack. However, if you have problems please email me at the address above and I will help you as quickly and accurately as I can. I want to support this and any future product that I put out.

Again, I thank you for your purchase and I will do everything I can to ensure you get the most out of this pack. Enjoy!
